

**G Intruder Alarms
& Detection**

Intruder Alarms

Whatever the size or location of your property, we can provide your organisation with a tailor-made solution to meet your specific security requirements. We offer a complete service, working closely with the Police Crime Reduction Office, manufacturers and insurance companies.

Our installation service is fast and efficient, designed to minimise disruption to your premises and have your system up and running as quickly as possible. We're experienced providers of police-linked systems, working to ACPO (Association of Chief Police Officers) policy standards, BS4737 and latest EN50131 European standard, and all our systems are fully NSI accredited.

Our extensive range includes systems for a variety of applications:

Audible

Traditional alarm system that activates a siren on your premises when triggered. (In line with the Police Policy ACPO Policy 2000, sirens do not generate an automatic police response.)

Friends and Family

Audible system equipped with a dialling unit or text messenger service, which calls up to four telephone numbers of your choice when the alarm is activated.

Digital Communicator

Uses signals which are relayed to a Central Monitoring Station. Ideal for householders or small businesses since it offers a cost-effective way to obtain police response.*

BT RedCARE

RedCARE provides continuous line monitoring of your alarm system 24 hours a day, 365 days a year. The system will detect if the telephone line is cut or if the alarm panel is unable to communicate, and inform the Alarm Centre in seconds. RedCARE uses existing BT speech lines and doesn't generate any call charges.*

Dualcom Plus Advanced System

Deploys a Digital Communicator and a Vodaphone data signal to ensure high security two-way communication with a Central Monitoring Station. In the event of a line cut it enables alarm systems to be monitored by the radio path.*

BT RedCARE GSM Advanced System

Like the Dualcom Advanced System, the BT RedCARE GSM Advanced System also offers the highest level protection for high-risk sites. RedCARE GSM combines a secure RedCARE landline connection with a GSM radio backup path. In the event of a line cut it enables alarm systems to be monitored by the radio path.*

Wireless Alarm Systems

Radio-based security systems (VHF 173 MHz) provide a reliable alternative to wired systems, particularly in situations where the latter would be difficult to install. There are two types, Class 3 and Class 6:

Class 3: Unsupervised signal transmission used for Audible and Friends and Family type systems.

Class 6: Supervised signal to achieve Police response using one of the connection methods mentioned.

Maintenance Packages

Your alarm system must be regularly serviced and maintained to ensure that your staff and property are protected from theft and loss. We offer customised maintenance packages, and provide a rapid response 24-hour call-out service, 365 days a year.

**Requires special design to meet ACPO standards.*

Guardian Security is NACOSS Gold approved and BS EN ISO 9002 quality assured. All our products are BS approved, installed to BS 4737 and DD:243.

CCTV Systems

CCTV systems are one of the most efficient methods of protecting your business from theft, damage and false accident claims. Not only are they a proven deterrent against crime, they may reduce your insurance and liability payments as well.

Our extensive range includes cost-effective systems to suit a variety of applications and budgets. Whether you're looking to protect a business, a town centre or retail premises, we can provide the technology you need to create a safe and secure environment.

Our qualified sales and technical staff will undertake a site survey at no obligation or cost to you, before recommending a tailor-made system that's right for your premises. We are always happy to demonstrate products on site and discuss any special requirements you may have.

We can provide a variety of surveillance solutions, ranging from a basic black and white camera which records to video, to an advanced, high performance colour/monochrome dome camera with 24-hour digital recording system, which can be accessed across a LAN or WAN/IP, from anywhere in the world.

We can also offer remote CCTV monitoring. When the camera is activated following an intrusion, clear images are sent through to an Alarm Receiving Centre.

A trained operator will then determine whether to alert your designated contacts or the Police.

Retail Surveillance

Our surveillance solutions provide the retail industry with technology to monitor store environments and transactions at POS (point of sale) in order to deter shoplifting and reduce staff theft. We can help protect environments in virtually any size of store, from a single shop to a large shopping centre.

VNPR (Vehicle Number Plate Recognition)

This advanced technology, available from Guardian, is used by HM Customs, Police and businesses to control access gates into car parks, and vehicle tracking.

Maintenance Packages

Your surveillance system must be regularly serviced and maintained to ensure that your system functions and performs to its optimum ability. We offer standard or fully comprehensive maintenance packages, and provide a rapid response 24-hour callout service, 365 days a year.

Contact us to find out how we can help you protect your premises with CCTV.

G **Verification**
& Access Control

Access Control

Access control systems are designed to monitor and control the movement of personnel and visitors, onto and within a site.

Guardian has the experience and skills to advise you on the best system to provide round-the-clock security for your premises, based on the number of staff or visitors you have. Our comprehensive range includes basic external or internal systems as well as sophisticated, fully networked PC-based access control systems.

Our qualified sales and technical staff will undertake a site survey of your premises, at no obligation or cost to you, before recommending a tailor-made solution to meet your security requirements.

We can supply a wide variety of access control systems, ranging from simple code access units to card and turnstile control mechanisms:

- Audio entry access control
- Video entry access control
- Networked access control
- Vehicle access control with barriers/gates
- Integrated access control system combined with other technologies, such as CCTV.

Maintenance Packages

Your access control system must be regularly serviced and maintained to ensure that your staff and property are protected. We offer customised maintenance packages, and provide a rapid response 24-hour callout service, 365 days a year.

Call us to find out how we can help you protect your premises from intruders.

Fire Detection and Awareness

Fire alarm and detection systems are an essential part of any commercial building. Whatever the size or location of your property, we can provide you with a fire protection system tailor-made to meet your requirements. We can work closely with the Fire Brigade, and with manufacturers of fire protection equipment, often inviting them to view a site before we design a system.

Our sales and technical staff will provide you with a firm quotation and our engineers will then install the system to the highest standards. We are always happy to provide competitive quotes for upgrading existing equipment as well as new systems.

Fire Alarms

Our range of fire detection and alarm systems includes conventional, "two-wire", or "addressable" systems, as well as alarm-intelligent fire detection packages. Qualified engineers and designers will assess your requirements and provide the best value option for your premises. The system can be linked to a central station so that the Fire Brigade can be alerted in the event of an alarm.

Fire detection technologies available from Guardian include:

- Optical detection
- Ionisation
- Heat detection
- VESDA
- Beam technology
- Call points

Fire Alarm Systems

Your fire protection and alarm systems and emergency lighting must be regularly serviced and maintained in order to function efficiently. Maintaining these systems is a legal requirement under the terms of the Fire Precautions in the Workplace regulations. Most companies have their systems checked four times a year. We offer a range of customised maintenance packages, and provide a rapid response 24-hour callout service, 365 days a year.

Emergency Lighting

Used to light an area if power is lost. We can supply emergency lights, and install and commission them on your premises. Your emergency lights must be regularly serviced and maintained to ensure that your emergency lighting operates at its optimum ability. We offer customised maintenance packages, and provide a rapid response 24-hour callout service, 365 days a year.

Call us to find out how we can help you protect your premises from the threat of fire.
